Self-Introduction
I’m Boris Zakharov
I am an Associate Professor in the Natural Sciences Department at LaGuardia Community College
I teach primarily SCB 208 and SCB 209: Vertebrate Anatomy and Physiology I and II.

Sometimes, I teach SCB 203 and SCB 204: Human Anatomy and Physiology I and II.
My M.S. diploma study was on spiders.

My PhD dissertation was on blood sucking horse flies (Diptera, Tabanidae).
It may be helpful to know that, while I take my teaching very seriously, I am otherwise pretty irreverent and have a somewhat dark sense of humor. I like to teach Anatomy and to help my students to master basic ideas, I wrote a textbook that, I hope, my students will use even after this course will be over as a helpful reference text.
Besides teaching, I do my research on ground spiders (Araneae: Gnaphosidae) at American Museum of Natural History (AMNH, New York) where I am a Visiting Scientist.
Nice to see You
